Project Title (not your own): _Art for All_   Lester   **Heuristic Evaluation**

Heuristic Broken	Description	Severity
Efficiency	A lot of clicks to get to each screen ex. many to discuss even if that's my main intention	1
Real world	Saving a painting → it's stored in search results instead of something like "favorites"	2
Visibility	A lot of layers and it can be difficult to keep track of navigational hierarchy : only know top layer (museum, search, or profile)	1
User control	Back button in search	1
